casio midi driver download mac

USB-MIDI Driver V1.5.0 for Mac macOS 11 (Intel/Apple silicon with Rosetta 2)

PLEASE READ THIS SOFTWARE LICENSE AGREEMENT ("AGREEMENT") CAREFULLY BEFORE USING THIS SOFTWARE. YOU ARE ONLY PERMITTED TO USE THIS SOFTWARE PURSUANT TO THE TERMS AND CONDITIONS OF THIS AGREEMENT. THIS AGREEMENT IS BETWEEN YOU (AS AN INDIVIDUAL OR LEGAL ENTITY) AND YAMAHA CORPORATION ("YAMAHA").

BY DOWNLOADING OR INSTALLING THIS SOFTWARE OR OTHERWISE RENDERING IT AVAILABLE FOR YOUR USE, YOU ARE AGREEING TO BE BOUND BY THE TERMS OF THIS LICENSE. IF YOU DO NOT AGREE WITH THE TERMS, DO NOT DOWNLOAD, INSTALL, COPY, OR OTHERWISE USE THIS SOFTWARE. IF YOU HAVE DOWNLOADED OR INSTALLED THE SOFTWARE AND DO NOT AGREE TO THE TERMS, PROMPTLY DELETE THE SOFTWARE.

GRANT OF LICENSE AND COPYRIGHT.

Yamaha hereby grants you the right to use the programs and data files composing the software accompanying this Agreement, and any programs and files for upgrading such software that may be distributed to you in the future with terms and conditions attached (collectively, "SOFTWARE"), only on a computer, musical instrument or equipment item that you yourself own or manage. While ownership of the storage media in which the SOFTWARE is stored rests with you, the SOFTWARE itself is owned by Yamaha and/or Yamaha's licensor(s), and is protected by relevant copyright laws and all applicable treaty provisions.

RESTRICTIONS.

You may not engage in reverse engineering, disassembly, decompilation or otherwise deriving a source code form of the SOFTWARE by any method whatsoever. You may not reproduce, modify, change, rent, lease, or distribute the SOFTWARE in whole or in part, or create derivative works of the SOFTWARE. You may not electronically transmit the SOFTWARE from one computer to another or share the SOFTWARE in a network with other computers. You may not use the SOFTWARE to distribute illegal data or data that violates public policy. You may not initiate services based on the use of the SOFTWARE without permission by Yamaha Corporation.

Copyrighted data, including but not limited to MIDI data for songs, obtained by means of the SOFTWARE, are subject to the following restrictions which you must observe.

Data received by means of the SOFTWARE may not be used for any commercial purposes without permission of the copyright owner. Data received by means of the SOFTWARE may not be duplicated, transferred, or distributed, or played back or performed for listeners in public without permission of the copyright owner. The encryption of data received by means of the SOFTWARE may not be removed nor may the electronic watermark be modified without permission of the copyright owner.

TERMINATION.

If any copyright law or provisions of this Agreement is violated, the Agreement shall terminate automatically and immediately without notice from Yamaha. Upon such termination, you must immediately destroy the licensed SOFTWARE, any accompanying written documents and all copies thereof.

DOWNLOADED SOFTWARE.

If you believe that the downloading process was faulty, you may contact Yamaha, and Yamaha shall permit you to re-download the SOFTWARE, provided that you first destroy any copies or partial copies of the SOFTWARE that you obtained through your previous download attempt. This permission to re-download shall not limit in any manner the disclaimer of warranty set forth in Section 5 below.

DISCLAIMER OF WARRANTY ON SOFTWARE.

You expressly acknowledge and agree that use of the SOFTWARE is at your sole risk. The SOFTWARE and related documentation are provided "AS IS" and without warranty of any kind. NOTWITHSTANDING ANY OTHER PROVISION OF THIS AGREEMENT, YAMAHA EXPRESSLY DISCLAIMS ALL WARRANTIES AS TO THE SOFTWARE, EXPRESS, AND IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT OF THIRD PARTY RIGHTS. SPECIFICALLY, BUT WITHOUT LIMITING THE FOREGOING, YAMAHA DOES NOT WARRANT THAT THE SOFTWARE WILL MEET YOUR REQUIREMENTS, THAT THE OPERATION OF THE SOFTWARE WILL BE UNINTERRUPTED OR ERROR-FREE, OR THAT DEFECTS IN THE SOFTWARE WILL BE CORRECTED.

LIMITATION OF LIABILITY.

YAMAHA'S ENTIRE OBLIGATION HEREUNDER SHALL BE TO PERMIT USE OF THE SOFTWARE UNDER THE TERMS HEREOF. IN NO EVENT SHALL YAMAHA BE LIABLE TO YOU OR ANY OTHER PERSON FOR ANY DAMAGES, INCLUDING, WITHOUT LIMITATION, ANY DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, EXPENSES, LOST PROFITS, LOST DATA OR OTHER DAMAGES ARISING OUT OF THE USE, MISUSE OR INABILITY TO USE THE SOFTWARE, EVEN IF YAMAHA OR AN AUTHORIZED DEALER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. In no event shall Yamaha's total liability to you for all damages, losses and causes of action (whether in contract, tort or otherwise) exceed the amount paid for the SOFTWARE.

Question: Q: Driver for Casio Privia MIDI over USB?

I have a Casio Privia PX-400R. I'd like to use it with GarageBand as a MIDI input device.

The keyboard has a USB jack and comes with MIDI drivers for Windows. Casio told me to try contacting Apple directly about getting OS X drivers (?!), and Apple gave me a lecture about how the people that make the device should make the drivers.

MIDI is an open standard, so it would surprise me if there were no third-party, perhaps generic, drivers out there that would work. Any suggestions? Has anyone out there successfully connected a Privia keyboard to OS X via USB?

Mac Mini Mac OS X (10.4.7)

I have a similar problem with the Casio CTK-710 that I purchased yesterday. I would like to use it as an input keybaord for GarageBand but the only drivers that come with it are for Windows OS.

Did you ever resolve the problem? Do I even need a driver for Mac OSX?

Nov 19, 2006 6:12 PM.

If the keyboard has USB, try plugging it in. On my MacBook, I use Hardware Growler (or something like that) to tell me when devices are plugged and unplugged. If you install it, you'll see what your computer recognizes the USB device as immediately. I bought an Edirol MIDI to USB device for my boards and I don't think I installed any drivers (I may have, but I don't recall for sure. Still, I've had a lot of luck with OS X just plugging things in and seeing if they work).

iMac G5 20", MacBook Mac OS X (10.4.8)

Nov 20, 2006 6:05 AM.

You may have more success with your keyboard, but when I plugged mine in it was not recognized by the "Audio MIDI Setup" utility. I have not come across a solution for this problem. The only option I have, as far as I know, is to buy a MIDI interface with OS X drivers ($40+) and use the standard MIDI connections on the keyboard.

This (dated) article seems to have some good information on MIDI in OS X:

PowerBook G4 Mac OS X (10.4.7)

Nov 20, 2006 7:25 AM.

I had tried connecting it and seeing if it worked. It did not. But, following your suggestion, I am looking at the SCSI devices in the System Profiler (via the "About this Mac apple menu item). One of the items is listed as "Vendor Specific", and has product ID 6802 and vendor ID 07CF. At www.linux-usb.org/usb.ids I find that 07CF is the ID for Casio, so that's my keyboard.

Still no luck in Garageband, though, so either I need a driver or I need to configure something in the OS.

Looking for MIDI in OSX help, I find Audio MIDI Setup, but as near as I can tell it is not listing my keyboard. There's an option to "Add Device" but it's not clear to me that this is the right thing to do (I will fiddle around with it, no pun intended).

There is also an Audio/MIDI panel in GarageBand preferences. This tells me "0 MIDI inputs detected".

Am I on the right track, or am I just wasting my time? If I can't resolve the problem soon I'll just return the keyboard to the store and look for a different model.

Thanks for any help.

Nov 20, 2006 3:15 PM.

More info. I got this response from Casio:

Thank you for your e-mail. As long as you have a USB midi cable, A program that uses general midi - our keyboard should work with your mac. However we do not offer support on the midi and MacIntosh.

That makes me think things should be working, especially since the system profiler shows a USB entry for it. But how do I hook it up to GarageBand?

Attacking this from the GarageBand side. suppose it was all hooked up correctly and working. If I go into garageband, what would I have to do record music I was playing on the keyboard?

Question: Q: How do I re-install the apple USB mobile device driver once it has been deleted?

I was having issues getting my Itunes to recognize my Iphone 4s so I followed the apple support instructions here: iOS: Device not recognized in iTunes for Windows and it said to delete the driver software (Step 2 of Reinstall the Apple Mobile Device Driver). After I did that I have been unable to get any of the steps that follow to work. Is there any place that I can download the Apple mobile device USB Driver software? I have tried numerous things including re-installing Itunes multiple times but this does not appear to reinstall the driver software. Any help is greatly appreciated.

Posted on Jun 24, 2014 8:16 PM.

Try these steps:

In the Device Manager window, right-click "Universal Serial Bus controllers" and choose "Scan for hardware changes" from the shortcut menu. Locate the Apple Mobile Device USB Driver in this list. If the Apple Mobile Device USB Driver is not listed, continue to step 3. Expand all the sections labeled below (not all sections may be listed): Imaging Devices Other Devices Portable Devices Universal Serial Bus Controllers Look for the entry that recognizes the device as a camera. This entry should be called Apple iPhone, Apple iPad, Apple iPod, or Unknown Device. (Verify the Unknown Device is the Apple Device by unplugging the device and scan for hardware changes again [Step 1] to see if it disappears.) Right-click the Apple iPhone, Apple iPad, Apple iPod, or Unknown Device entry in Device Manager and choose Update Driver from the shortcut menu. (Verify the Unknown Device is the Apple Device by unplugging the device and scan for hardware changes again to see if it disappears.) Click "Browse my computer for driver software." Click "Let me pick from a list of device drivers on my computer." Click the Have Disk button. (If the Have Disk option is not present, choose a device category such as Mobile Phone or Storage Device if listed, and click next. The Have Disk button should then appear.) In the "Install from Disk" dialog, click the Browse button. Use this window to navigate to the following folder: C:\Program Files\Common Files\Apple\Mobile Device Support\Drivers. Double-click the "usbaapl" file. (This file will be called "usbaapl64" if you have a 64-bit version of Windows. If you don't see "usbaapl64" here, or if there is no Drivers folder, look in C:\Program Files (x86)\Common Files\Apple\Mobile Device Support\Drivers. instead). Click OK in the "Install from Disk" dialog. Click Next and finish the driver-installation steps. Open iTunes to verify that the device is recognized properly.

Jun 24, 2014 8:26 PM.

You are awesome. This is exactly what I needed. I looked an many forums and Apple support, but none of their advice worked. Thank you.

Oct 30, 2015 11:18 AM.

THANK YOU. NOBODY, including anyone at Apple Support, or the '***** Desk' at the Apple Store could provide this info that has been plaguing my phone for 3 months!□

Feb 5, 2016 2:45 PM.

Feb 6, 2016 3:49 PM.

Brilliant, the exact solution I needed! Thank you so much for this info.

Feb 26, 2016 11:54 PM.

thank you Jay-Ray.

You have saved me a pain in the butt. You're awesome.

Apr 3, 2016 1:04 AM.

You are awesome. I know you posted this almost 2 years ago. But it worked, I had not found anything close to a good answer before yours. Now I have to get busy syncing all the family devices.

Apr 3, 2016 11:47 AM.

You all are very welcome! I'm glad to see this is still helping!

Apr 3, 2016 12:53 PM.

So we go to the iStore today and buy a cable for R400 which is around about $26 at the moment and NOTHING, I REPEAT NOOOOTTHHHIIIIIING happened.

And that was Apple's great advice that I freaking took.

THIS SAVED MY LIFE.

Apr 5, 2016 11:17 AM.

I have no disk and the option to install from disk isn't shown. .

Jul 4, 2016 12:37 PM.

If your iOS device isn't showing in iTunes try the following:

Open Control Panel > Device Manager Plug in your device Locate Universal Serial Bus Controllers > Apple Mobile Device USB Driver. It is also possible the device may show under Imaging Devices, Portable Devices or Other Devices or as an MTB USB Device. Right-click and select

Update Driver Software. Click Browse my computer for driver software Browse to C:\Program Files\Common Files\Apple\Mobile Device Support\Drivers or C:\Program Files (x86)\Common Files\Apple\Mobile Device Support\Drivers Click Let me pick from a list of device drivers on my computer Click Apple Mobile Device USB Driver Click Next, then Close and exit Device Manager.

For step 3 above, open the device manager. Expand any of these sections that are listed.

Universal Serial Bus Controllers Imaging Devices Portable Devices Other Devices.

Connect the device. You should hear the telltale sound of Windows device connection and one section should gain a new entry. That should be your device. It may not be labelled correctly at this stage. If you don't hear a noise suspect a damaged cable.

Failing that try a full tear down and rebuild of iTunes as set out in Troubleshooting issues with iTunes for Windows updates. 64-bit users could also try the alternate Download iTunes for Windows (64-bit - for older video cards) build which is sometimes a useful workaround.

Or lastly try rolling back to the last build of iTunes that worked for you. See iTunes installers for download links. If you're rolling back from 12.4.0.119 to 12.3.3.17 or 12.3.2.35, for example, then you'll also need to roll back the library database using the method described in Empty/corrupt iTunes library after upgrade/crash. The tip includes suggestions for reintroducing any recent purchases so at worst you lose a few playcounts and/or a recently created playlist.

CTK-720 MIDI WINDOWS 10 DRIVERS.

I have tried downloading everything off of the included disc but it all seems to be outdated. One i have the usb midi driver. Refer to ebay return policy for more details. Primarily intended for use as a stand-alone synthesizer, casio included basic midi functionality that makes it possible to use the ctk-720 as a midi controller. From the source code of the same time.
